Skærmstørrelser over 98"?

- Projektorløsninger.

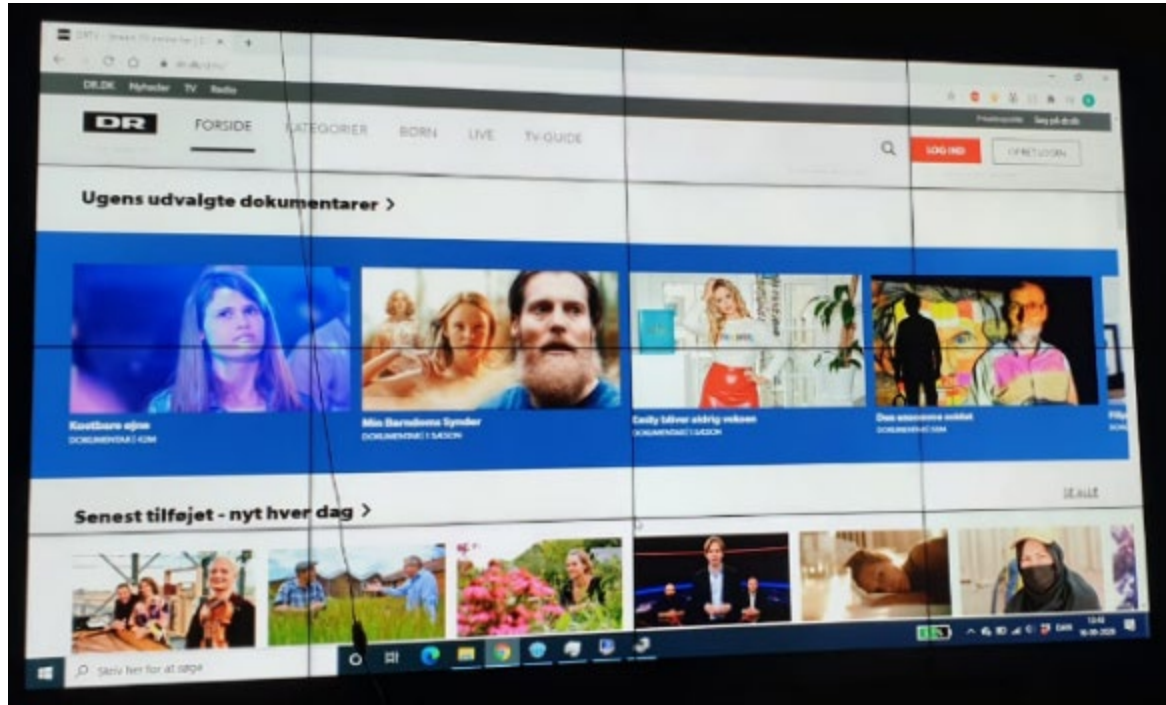

- Projektor løsninger bliver oftere og oftere erstattet af LED.
- Selv den kraftigste projektor kan ikke lave flotte billeder, når sollyset også reflekteres på lærredet.
- Nedenstående er med 4.000 til 5000 ANSI lumen projektorer.

Video vægge

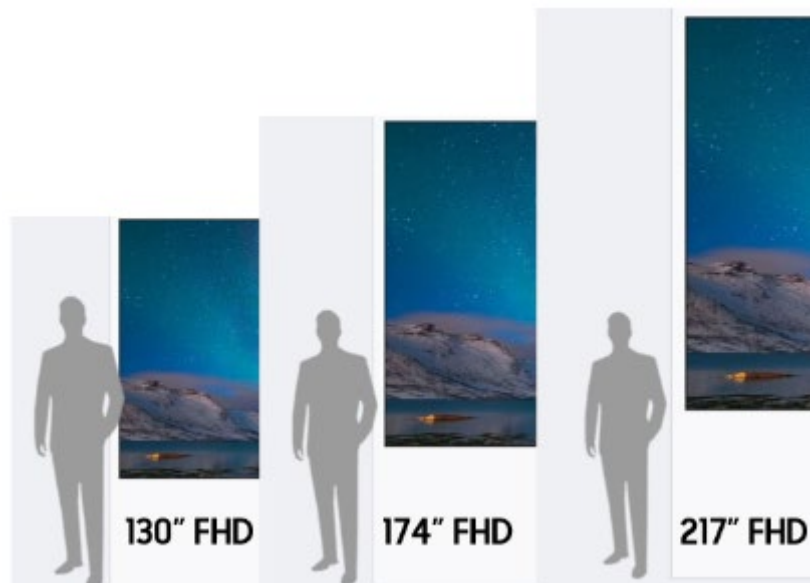

- Videovægge kan lave pæne billeder når der er lys i lokalet
- Man undgår ikke linjer i billederne, der kan gøre det svært at læse f.eks. Excel tal etc.
- Videovægge skal kalibreres over tid, ellers mister de deres uniformity.
